

PETERBILT MODEL 325

A commercial driver's license is not required to operate a Peterbilt Model 325. Available as a truck only, and perfect for light and medium duty applications, the Model 325 is a hard working Class 5 powerhouse. With a GVW of 19,500 pounds, it thrives with the 200-300 HP output of the PACCAR PX-6 engine under the hood. Everything is driver-friendly. Gauges are easy to read. Switches are easy to reach. Service points are quick to access. The hydraulic brakes feature ABS. It's all designed to keep non-commercial drivers relaxed and productive.

The Model 325 is designed to maximize the efficiency of non-commercial drivers with easy-to-read gauges, hydraulic brakes, a quick-check engine and single-axle drive. It's ideal for light towing, pickup and delivery, roll-off, landscaping and municipal utility applications.

A distinctive Peterbilt feature is the split windshield design. Made of two pieces of glass instead of one, it allows for easier and more cost effective replacement.

You won't need drivers with a CDL. The hydraulic brakes come standard and they're as easy to service as they are to operate.

The hood tilts open 90° for easier engine access and serviceability. The durable Metton® hood is secured with a locking device to prevent unintentional closure.

Available in a single axle truck configuration with the power to handle Class 5 applications day in and day out.
